

HTTP Endpoints:

- **Uploading a file (POST)**
 - Submits a file + filename to be processed and returns file ID
 - Triggers an asynchronous call to zip the file
- **Retrieving a file (GET)**
 - Takes file ID and returns zipped file (error if file has not yet been zipped)
- **Listing files (PUT)**
 - Produces list of uploaded files with their name, date uploaded, and size
 - Updates list after file has been uploaded

Tests: to show that the functions work as intended
